

## Seeking Research Participants: Children with Autism Ages 2-17

Children with a diagnosis of autism spectrum disorder (ASD) ages 2-17 years are invited to participate in a study looking at patterns of behaviors of children with autism at home, at school, and in the community. One goal of the study is to create a new tool that can be used in future studies to better measure if treatments are effective for children. To do this, we need your help!

This study includes:

- Play-based assessments
- iPad games
- Cognitive testing
- Questionnaires for the caregiver

*This study will take between 2-4 hours to complete. You will be reimbursed \$100 for your time.*
